In the midst of the COVID-19 pandemic, do you find any hidden promotion of nuclear energy in your country?	Please describe about the hidden promotion of nuclear energy in your country	As you learned Lessons from Fukushima, what is your message to your people in the middle of COVID-19 related chaos.	If you have any other comments or opinions about our activities, please describe in the form below. We will read it carefully.	
Yes	Some nuclear reactors were permitted to restart in Japan.	Governments or those who have power always utilize disasters.		
Yes	Re-starting of nuclear power plants included in SDGs action plan.	Learn the truth and do not let misinformation mislead.		
Yes	They have not given up, because nuclear promotion is an opportunity for corruption	however hard to control a pandemic it is worse facing a nuclear disaster		
Yes		Think for yourself deeply and choose your actions. Be respectful and tolerant of others' choices. Be aware of who is being sacrificed.		
No				
Yes	The head of Jordanian Atomin Energy Council come back to talk about the benefits of nuclear energy.	Everyone is probabjy will affected by this disease.	The most important thing is to offer right and solid information for citizens.	
Yes	"Economic Recovery" becomes the mainstream discourse.	It is a must to find an alternative to capitalist modernization.	I fully support your work and activities. Let's share information and work together.	
No		Thailand has not yet have nuclear power plant although the country make many attempts to materialize it. The nuclear power plant, if built will require massive investment while there are still risks on nuclear accident that no one dare to say it will never happen. The risks of nuclear power plant is including impacts on environment, ecosystems and human health which exacerbate any novel diseases or pandemic like COVID-19.		
Yes				
No				
No		Awareness on current developments from reliable resources, individual level preventive actions and active citizenry actions		
No		Follow orders	Well done	
No				
No		The message we would like to send is that not only individually but also a whole nation can overcome anything as long as we are aware, helpful, empathetic and compassionate also every aspect needs research and skill development to prosper.	We as nations under different ethnicities consider every ethnicity as an individual umbrella providing shelter to our own. That protection and shelter should reach people globally to grow and prosper as a whole.	

Yes	<p>1. Presented as part of building back and economic recovery.</p> <p>2. Presented as low carbon (or even zero carbon) as means of fighting climate change. Often 'low carbon' is code for 'nuclear' especially in Wales - it is referred to in same context as renewable energy.</p> <p>3. The word 'nuclear' omitted in presentations about economic development e.g. at Trawsfynydd in Wales.</p>	<p>1. Get the correct facts.</p> <p>2. Don't trust Government.</p> <p>3. Combat disaster capitalism.</p> <p>4. Promote a real and genuine green future, to create sustainable jobs with a high degree of local ownership where possible.</p> <p>5. Insist that there are many values important to people, not just economic ones.</p>	Your booklet on Fukushima is a great example to the rest of the world. It could provide a model on how to respond to a post-Covid world.	
Yes	Nuclear colonialism: Nuclear waste in indigenous area	Since Covid 19, I have felt the transition from democracy to totalitarianism in the US surveillance society. Our voluntary individual power is needed to create a society with transparency of information, freedom of speech, and a relationship of trust.	Thank you for organizing events.	
No		Stay calm. Take note of science based advice.	What you are dealing with in Fukushima is far more permanent than the Covid-19 pandemic. There is no vaccine for the effects of a nuclear disaster.	
No		To have media-literacy and patience in order not to believe in conspiracy theory	I'm interested in general overview of Fukushima Booklet dissemination for each language version: numbers of printed copies, PDF download, the ways of promotion, lessons for similar projects in the future	
No		Resilience pays!	We appreciate your global movement to explore the similarities between the impacts of "Fukushima" and COVID19. For Nepal, both these disasters were exogenic, but we suffered directly and indirectly. DRR and CCA and all other development efforts should be global with due consideration to the level of economic and strategic importance of the country.	
No		Definition of disaster needs to be broadened. poor governance and greed ridden business corporations may be made as trigger factors of disasters	Public Health should be made part of state responsibility.	
Yes	I do not think it is actually 'hidden' or concealed, but there have always been people and political parties who say that nuclear energy is important to deal with the climate change. This is regardless of Covid-19 or not.	I was in Japan when Fukushima happened. Now I am in the Netherlands. Social dynamics are so different in these two countries. One big difference is that I can totally rely on the Dutch Government that they are seeking and talking about the facts and truths as they get to know. Some people here are frustrated about the lockdown and there have been demonstrations, etc. I think they are treated fairly and according to the applicable law and regulations. My message to the Japanese people would be that we all need to seek true information and think for ourselves, rather than simply listening to what the Japanese Government say.	Honestly speaking, I did not really connect Fukushima issues and Covid-19 situation. Indeed, there are similarities and lessons that we could draw from Fukushima, to apply to the current Covid-19 situation. However, at the profound level, there are fundamental differences. Fukushima was a manmade disaster that could have been prevented. Covid-19 is a pandemic. In my view, one important lesson can be that people, anywhere, need to think for themselves rather than just receiving information disseminated by the Government. We need to also develop a critical eye to anything reported by the media.	
No		Covid 19 avoided put us in quarantine and isolated us from the outside world and we experienced lock down . But in terms of radioactive pollution we will be forced to avoid ourselves from the air we breathe, tap water we use and the soil we live on...	In terms of Covid 19 we understood that if our immune system is strong enough we will be getting ill less... So, we must also consider about the immune system of people which is certainly being weakened by radiation...First we need to know the ratio of having Covid 19 in Fukushima and Okinawa for example. Secondly we need to get more data to compare immune system of the people living in Fukushima and Okinawa for example. This information will enable us to make pressure on governments that we do not want industries which weaken human beings' immune system.	
No		Trust official science reports instead of fake news and government need to be transparent in information sharing.		
No		Learn clearly about that	Not so much	
No				

Any activities by online/offline for anti-nuclear energy movement in 2020?

any activity by online/offline for anti-nuclear energy movement in 2020?

Jordan	December/ 2020 Jordanian Parliments Council
Anglesey, Wales, UK	Several online meetings throughout pandemic, mostly within Wales, but also including UK wide with US input. Also international webinars with FoE Japan and others with Beyond Nuclear International (including input from Canada).
New York City, USA	March, New York, July, August, Online Jordanian Parliments Council
Gwynedd, Wales, UK	Various zoom meetings of the group PAWB/CADNO, also larger webinars related to the nuclear industry. I have no dates. Jordanian Parliments Council
Warsaw, Poland	Writing articles for publication and informing on SNS
Istanbul, Turkey	As members of the Antinuclear Platform in Turkey we held our congress online last week. Besidessince 2020 we have been performing our meetings online for our movement.
Soul, Korea	We shared small handbook to citizens at seoul
Horsham, Australia	Held online (mainly on Zoom) between July 2020 to current (March 2021). The research fieldwork on Fukushima-Cairns recuperation practice continued. The refreshment camp was cancelled (planned in July 2020) but there were monthly Zoom catch ups with previous and prospective participants to talk about the state of Fukushima from their viewpoint, and how their experiences of Coronavirus are reminiscent of the time immediately after the nuclear explosion.
Victoria, Australia	We held a workshop in New Zealand last February to learn about the damage caused by the Fukushima nuclear accident and evacuation.

Victoria, Australia

Your remarks about the similarities

Thailand Thailand has a latest version of its Power Development Plan (PDP 2018 Revision.1) which removed previously 2 planned nuclear power plants. However, related government agencies still working on promoting nuclear technology including nuclear power plant.

Pune, India **The lived experience of vulnerable population in both scenarios, helplessness of most marginalized during the pandemic and nuclear disaster.**

Bangladesh As we weren't ready for the COVID-19 pandemic, it took us time to prepare for this. In the meantime we faced a lot of losses but now we are recovering from it and we have a lot of plans and resources to overcome the situation.

Anglesey, Wales, UK In UK, largest number of deaths in Europe, yet UK Government present their efforts as unifying people. UK Government have awarded contracts worth millions of pounds to their supporters and friends in business i.e. disaster capitalism. Also in UK, Governments of Wales, Scotland and Northern Ireland have their own powers, so details of Covid policy have varied from England.

Gwynedd, Wales, UK Its a bit complicated in the UK as there are 4 governments. It soon became obvious that the smaller nation governments i.e. Wales, Scotland and Northern Ireland had a far more responsible approach than the English government. Of course, within the Welsh government there has been a lot of political point scoring/criticising during the crisis.

New York City, USA **Biased coverage, Peer pressure, Surveillance society, Totalitarianism**

Nepal Ignorance about mega-disasters; lack of awareness and drill, lack of action due to complacency towards mega-disasters.

Pakistan Most disasters provide opportunity to most governments to blame nature and to use public money for political gains

Istanbul, Turkey the questions above are not applicable in Turkey. The society in Turkey has huge economic social and political problems. Fukushima Nuclear Disaster happened 10 years ago but there has been a progressing nuclear power plant construction in Turkey since then...

Soul, Korea **Human relationship network is damaged.**

Horsham, Australia **From my research, the participants have mentioned about similarities such as restrictions of everyday life such as mobility, wearing masks; and discrimination and divisions in relationships.**

The hidden promotion of nuclear energy in your country

Jordan They have not given up, because nuclear promotion is an opportunity for corruption

Jordan **The head of Jordanian Atomic Energy Council come back to talk about the benefits of nuclear energy.**

Hong Kong, China "Economic Recovery" becomes the mainstream discourse.

Anglesey, Wales, UK
1. Presented as part of building back and economic recovery.
2. **Presented as low carbon (or even zero carbon) as means of fighting climate change. Often 'low carbon' is code for 'nuclear' especially in Wales - it is referred to in same context as renewable energy.**
3. The word 'nuclear' omitted in presentations about economic development e.g. at Trawsfynydd in Wales.

New York City, USA
Nuclear colonialism: Nuclear waste in indigenous area

The Netherlands
I do not think it is actually 'hidden' or concealed, but **there have always been people and political parties who say that nuclear energy is important to deal with the climate change.** This is regardless of Covid-19 or not.

	As you learned Lessons from Fukushima, what is your message to your people in the middle of COVID-19 related chaos.
Japan	Governments or those who have power always utilize disasters.
Japan	Learn the truth and do not let misinformation mislead.
Jordan	however hard to control a pandemic it is worse facing a nuclear disaster
Japan	Think for yourself deeply and choose your actions. Be respectful and tolerant of others' choices. Be aware of who is being sacrificed.
Jordan	Everyone is probabjy will affected by this desease.
Hong Kong, China	It is a must to find an alternative to capitalist modernization.
Thailand	Thailand has not yet have nuclear power plant although the country make many attempts to materialize it. The nuclear power plant, if built will require massive investment while there are still risks on nuclear accident that no one dare to say it will never happen. The risks of nuclear power plant is including impacts on environment, ecosystems and human health which exacerbate any novel diseases or pandemic like COVID-19.
Pune,India	Awareness on current developments from reliable resources, individual level preventive actions and active citizenry actions
Sabah,Malaysia	Follow orders
Bangladesh	The message we would like to send is that not only individually but also a whole nation can overcome anything as long as we are aware, helpful, empathetic and compassionate also every aspect needs research and skill development to prosper.
Anglesey, Wales, UK	1. Get the correct facts. 2. Don't trust Government. 3. Combat disaster capitalism. 4. Promote a real and genuine green future, to create sustainable jobs with a high degree of local ownership where possible. 5. Insist that there are many values important to people, not just economic ones.
New York City,USA	Since Covid 19, I have felt the transition from democracy to totalitarianism in the US surveillance society. Our voluntary individual power is needed to create a society with transparency of information, freedom of speech, and a relationship of trust.
Gwynedd,Wales, UK	Stay calm. Take note of science based advice.
Warsaw,Poland	To have media-literacy and patience in order not to believe in conspiracy theory
Nepal	Resilience pays!
Pakistan	Definition of disaster needs to be broadened. poor governance and greed ridden business corporations may be made as trigger factors of disasters
The Netherlands	I was in Japan when Fukushima happened. Now I am in the Netherlands. Social dynamics are so different in these two countries. One big difference is that I can totally rely on the Dutch Government that they are seeking and talking about the facts and truths as they get to know. Some people here are frustrated about the lockdown and there have been demonstrations, etc. I think they are treated fairly and according to the applicable law and regulations. My message to the Japanese people would be that we all need to seek true information and think for ourselves, rather than simply listening to what the Japanese Government say.
